Armed Conflict Location & Event Data Project (ACLED)

Subject: Application for Digital Content and Marketing Coordinator

Dear Jack Gisby and the ACLED Hiring Team,

Data on conflict is only useful when people can actually find it, trust it, and use it on the ground, whether that is a field office tracking regional instability or a policy team relying on timely research. Bridging that gap is a communications,digital platform, and growth challenge as much as a research one, which is why I am applying for the Digital Content and Marketing Coordinator role.

I am based in the Philippines, and since 2025 I have worked remotely with international clients, consulting on web platforms, content systems, and automated data workflows using Python, Power BI, and SharePoint. Few of my job titles have said *"marketing,"* but much of the work was: defining audiences, choosing channels, running digital campaigns, and reporting the results.

At the UNHCR Global Protection Cluster in Geneva, my supervisor designated me as the decision-owner for the Drupal website and digital knowledge platform. Working with a part-time IT colleague and minimal day-to-day supervision, I kept protection information accessible to 15 global operations, including conflict-affected settings. I designed and sent the Cluster's Mailchimp newsletters and created its social media content calendar for LinkedIn and X (Twitter). Over six months, our organic LinkedIn following grew by 109.7% and X/Twitter added 652 followers, generating 124,373+ total engagements while supporting 20+ advocacy campaigns.

At the World Meteorological Organization, I co-led the staff adoption campaign for a SharePoint intranet migration using segmented Mailchimp emails and targeted training sessions, achieving over 80% staff reach while significantly reducing post-launch support requests. I also used participation data to audit our Communities of Practice, retiring inactive networks and launching new ones based on actual engagement. Earlier, at the Local Government Academy in Manila, I served as Project Lead for 20 live executive coaching sessions hosting 500+ local leaders each (10,000+ cumulative attendances) during the COVID-19 response.

Through my independent project, **timothycastillon.com/field/notes**, and my academic research on urban risk and environmental resilience published through the University of Porto, I pair structured field data with human-centered storytelling. Measuring something as complex as network disruption or conflict dynamics requires both quantitative tracking and qualitative contex t– a balance I bring to every project.

I should be clear about what I have not done. I have not managed paid advertising budgets, and my CRM hands-on experience leans toward SharePoint and Mailchimp rather than Salesforce lead scoring. My results so far are about reach, adoption, and engagement rather than commercial revenue, though the fundamental logic of reach, registration, attendance, and follow-up is the exact one this role runs. When I started with Drupal and SharePoint, I had no prior knowledge, yet within a few months, colleagues were relying on me as the technical lead. I learn tools rapidly, and my live portfolio demonstrates that self-taught capability.

As requested, I have attached four campaign examples detailing my role, audience, channels, and measurable results. I would welcome the chance to discuss them with you and the team.

Sincerely,
Timothy Earl Mateo Castillon
